Central Doorway Foam Station

READ ALL INSTRUCTIONS BEFORE OPERATING EQUIPMENT

WARNING

Read this manual completely and understand the machine before operating or servicing it.

1. Always wear protective clothing, gloves, and eyewear while operating or servicing unit.
2. Avoid contact of cleaning agent with skin and eyes. If contact occurs, see SDS sheet for further first aid measures.
3. Follow safety instructions of chemical manufacturer (SDS).
4. Incoming air pressure cannot exceed 100 psi (6.9 bar).
5. Do not exceed a fluid temperature of 100°F (37.8°C).
6. Only use clean and dry air. Air must be filtered and free of moisture or pump life will be diminished. If needed, install air an dryer before unit.
7. Do not use air lubricator before the unit.

PROTECT THE ENVIRONMENT

Please dispose of packaging materials, old machine components, and hazardous fluids in an environmentally safe way according to local waste disposal regulations.

Always remember to recycle.

*Specifications and parts are subject to change without notice.

Specifications:

Tip AssemblyNZA-DS-TL-1 (Sold Separately)

Foam output.....30 gallons/minute
(112 liters/minute)

Foaming pattern... 12 feet wide X 5 feet in length (3.66 meters wide X 1.52 meters long)

Requirements:

Compressed air 40 to 80 psi (2.8 to 5.5 bar) with 5 to 10 cfm (141.6 to 283.2 l/min)

Chemical requirements: follow all instructions from chemical manufacturer.

Pre-mixed chemical must be supplied by a properly sized header system at 2 GPM and 40 to 80 PSI (2.8 to 5.5 bar).

Acceptable Products: Quat Sanitizers

DO NOT USE: Acid Quat

Safety Instructions:

1. Always wear safety goggles and protective gloves while servicing foam unit.
2. Avoid contact of cleaning agent with skin and eyes.
3. If contact occurs, see MSDS sheet for further first aid measures.

Installation Instructions:

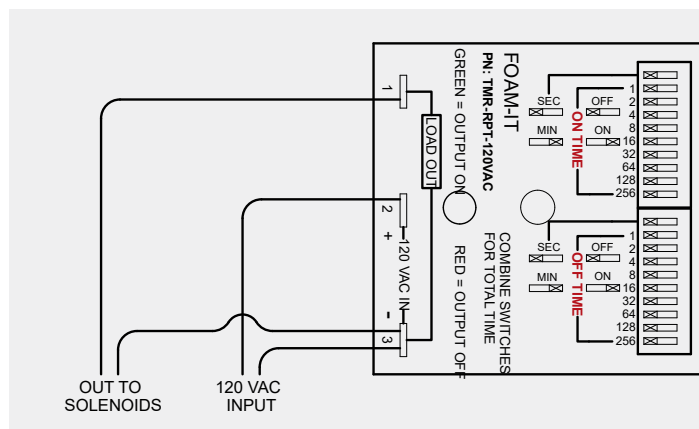

1. Remove all parts from the shipping box.
2. Mount control box to vertical surface with the screws and anchors provided.
3. Mount the nozzle assembly at the doorway being foamed with the two stainless steel mounting brackets that are included. It is important to mount the nozzle assembly 4 to 6 inches off the floor to ensure proper foam coverage.
4. After the control box and nozzle assembly is mounted, run ½ inch tubing from the solution discharge to the elbow fitting of the nozzle assembly or the foam quality will be reduced. Then run the ½ inch quick tubing from the air output of the control box to the nozzle assembly.
5. Connect compressed air to the control box.
6. Make sure the toggle switch is in the "OFF" position and plug the unit into a GFCI protected 110VAC outlet.
7. Set the timer (see TIMER ADJUSTMENT INSTRUCTIONS)
8. Connect the control box to the header supply line from the chemical room. Use the ½ inch NPT fittings provided. Make sure shut off valve are in between the header supply line and the control box. This will ensure the ability to deactivate the control box if it needs to be serviced.

Operation Instructions:

1. Turn the toggle switch on.
2. Open the needle valve all the way on the fluid side of the control box. Reduce the air pressure to 10 psi or less. As unit is running slowly increase air pressure until desired foam quality is achieved.
3. If foam volume is too high, turn fluid needle valve until desired flow of foam is achieved.
4. Turn the toggle switch on or off to activate or deactivate the system.

Troubleshooting Instructions:

1. If the foam sputters out of the spray tip, first, try to adjust the needle valve and the air regulator to create better foam. Second, more chemical may need to be added to thicken the foam.
2. If only liquid or only air comes out the spray tip. First, adjust the needle valve and the air regulator to make sure one of them is not closed. Second, make sure the wiring is all connected. Third, one of the solenoids may need to be replaced. If the liquid still will not come out, check to make sure there is liquid in the tank for the pump, and be sure the pump is running. If the pump is not running, it may need to be replaced.

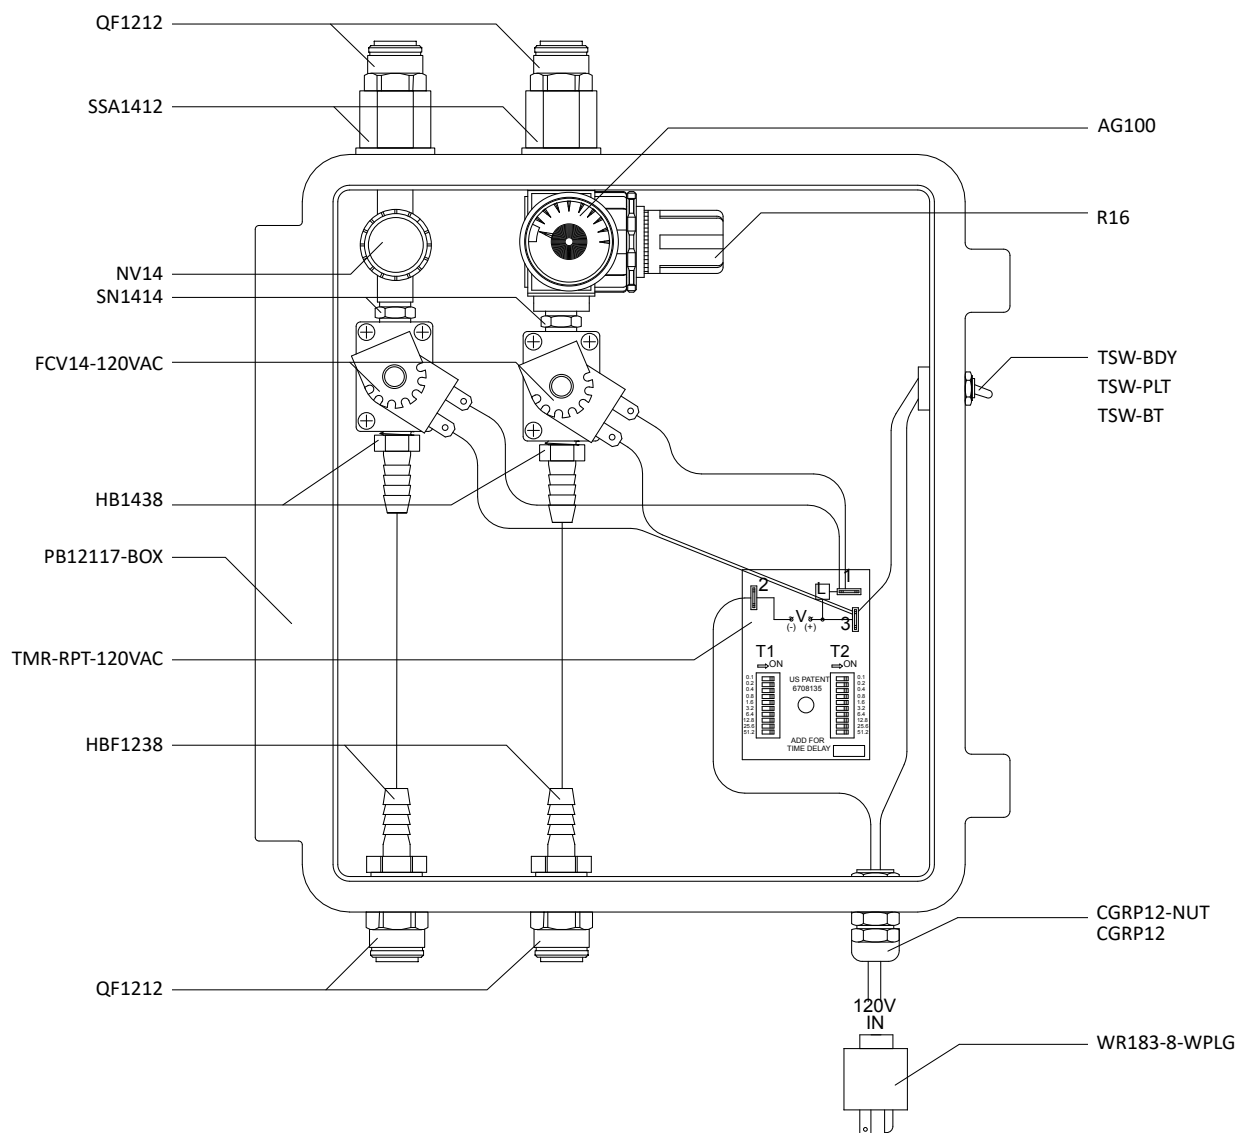

TIMER ADJUSTMENT INSTRUCTIONS:

1. The timer is an adjustable repeat cycle timer with the "ON" time operating first. ON and OFF times can range from 1 second to 511 minutes.
2. Starting with the ON time, move the top dip switch to the left for SEC (seconds) or to the right for MIN (minutes) to set the desired time interval.
3. The next 9 dip switches will be used to control the total active time. To the left is inactive and to the right is active. Combine the numbers next to the active dip switches to achieve the desired time.
4. Repeat the above steps for the OFF time setting.
