# Proportioning Unit

## SPECIFICATIONS

Hydrominder 511

5, 20, or 55 gallon sizes

Removable cover for easy access

Metering tips for various concentration

Back flow preventer

The proportioning tanks combines a reservoir with a float valve and proportioner to provide a constant supply of mixed product for units to draw from. The float valve automatically turns the water supply on and off to keep the reservoir full. The proportioner has replaceable metering tips to allow for several different chemical concentrations.
